

IOSH Working Safely Certificate (1 Day Course)

(Institute of Occupational Safety and Health)

This one-day IOSH course is aimed specifically at those people who are required to manage safely and efficiently in accordance with their company's policies and procedures.

Training Objectives

1. Introducing working safely

This module stresses the realities of the human suffering behind the statistics and emphasises the importance of personal responsibility.

2. Defining hazard and risk

This module puts 'hazard' and 'risk' into everyday language, and uses familiar examples to show what can happen. Focusing on the six broad hazard groups, delegates are asked to think about the hazards and risks they come across in their own work. 'Risk assessment' is demystified – delegates learn that we all carry out informal assessments day in, day out.

3. Identifying common hazards

All the main issues are covered in this module – entrances and exits, work traffic, fire, chemicals, electricity, physical and verbal abuse, bullying, stress, noise and the working environment, slips, trips and falls, and manual handling.

4. Improving safety performance

This module deals with systems and processes, making sure that any jargon is explained in easily understood terms. The session bridges the gap between management and workforce, encouraging delegates to play a part in processes that are commonly seen as just down to their manager or supervisor.

5. Protecting our environment

A short but effective introduction to waste and pollution leads into a look at how organisations and individual team members can get involved in reducing environmental impacts.

IOSH Certificate

At the conclusion of the course delegates will undertake a short multiple assessment and three hazard/risk spotting exercise.

Delegates who have been successful will be provided with an IOSH certificate.
Price is £147 + VAT per person – group discounts available.
